Ecommerce Sales Analysis Dashboard Report

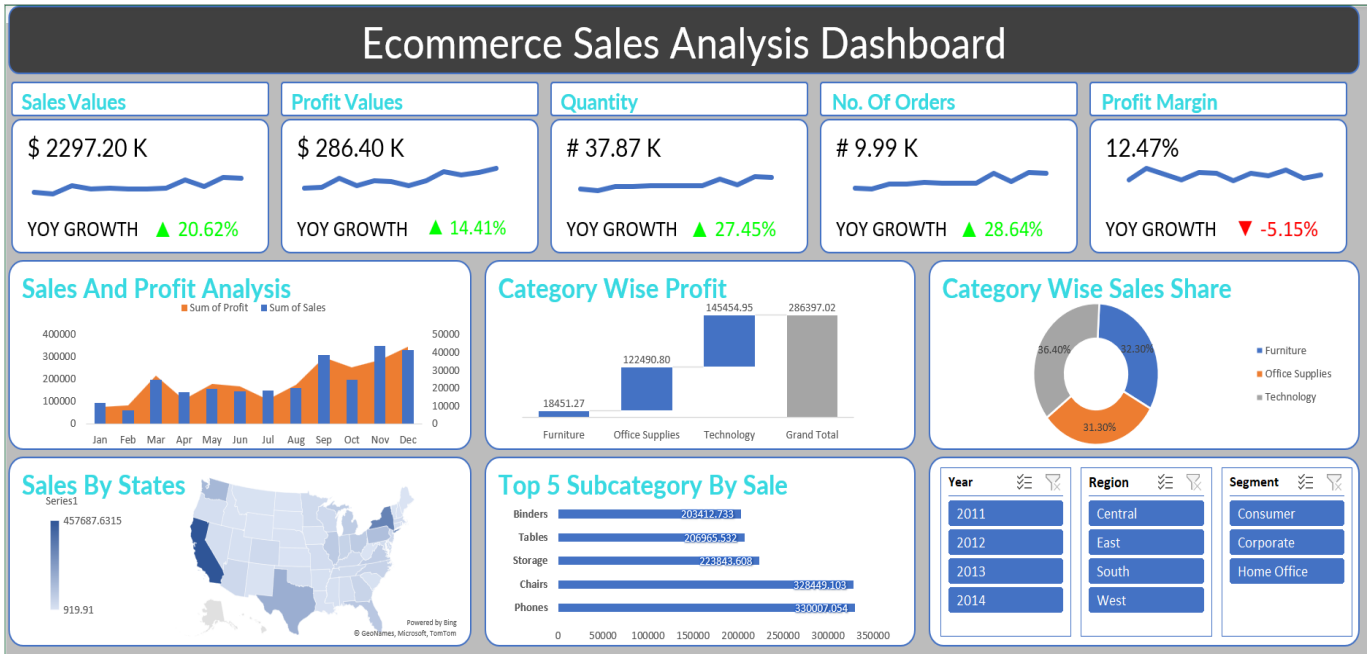
1. Project Overview

This project presents an **Ecommerce Sales Analysis Dashboard** built using Microsoft Excel. The objective of this analysis is to evaluate sales performance, profitability, product category trends, and geographic distribution of sales.

The dashboard helps identify key business insights such as high-performing product categories, sales trends over time, and regional sales performance. These insights can support data-driven decision-making for improving overall business profitability.

---

2. Dashboard Overview



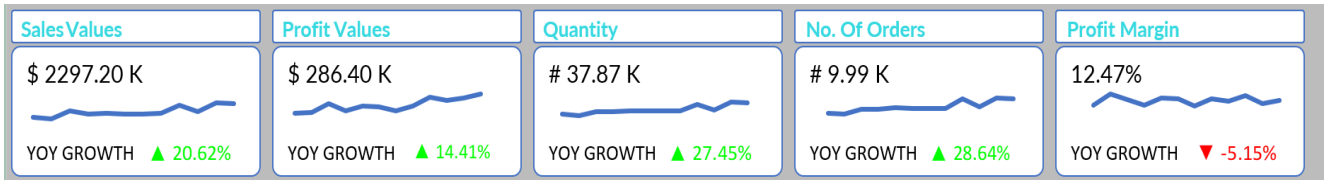
The dashboard includes multiple visualizations that help understand ecommerce performance. It presents key business metrics such as total sales, profit, order

volume, and profit margin. The dashboard also includes charts that analyze sales trends, category performance, top product subcategories, and sales distribution across different states.

Interactive filters allow users to analyze data based on **year, region, and customer segment**.

---

3. Key Performance Indicators (KPIs)



The dashboard highlights the following important business metrics:

Metric	Value
Total Sales	$2.29 Million
Total Profit	$286.40 Thousand
Total Quantity Sold	37.87 Thousand
Total Orders	9.99 Thousand
Profit Margin	12.47%

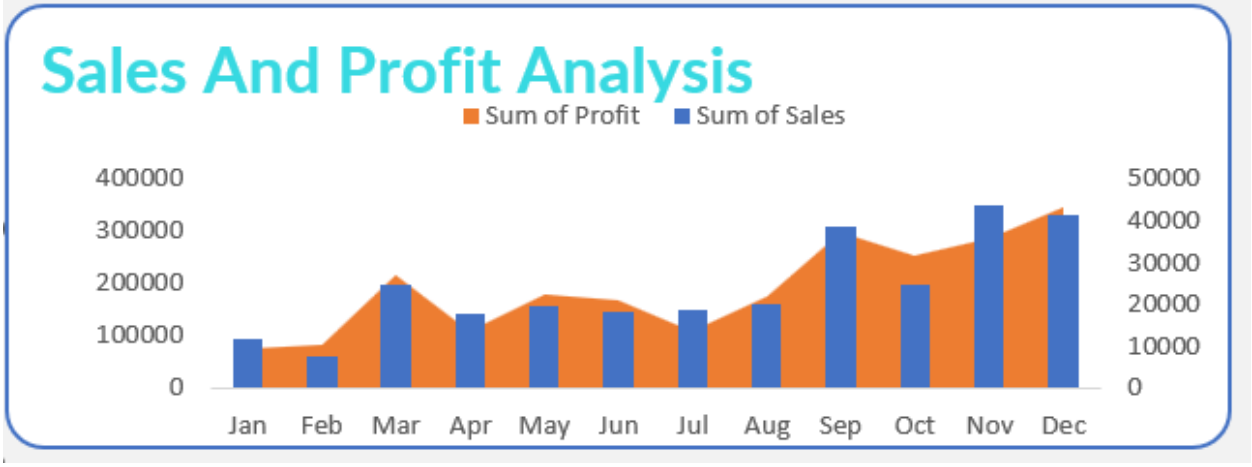
Insight

The business generated **$2.29M in total sales** with an overall **profit margin of 12.47%**, indicating moderate profitability.

---

4. Sales and Profit Trend Analysis

The **Sales and Profit Analysis chart** shows monthly performance of the business.

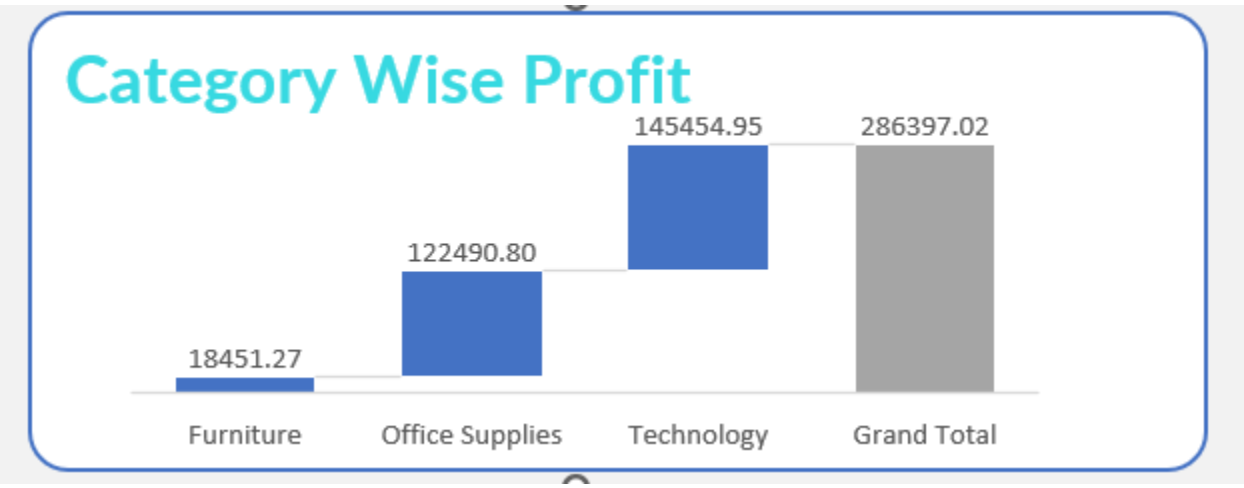


Key Observations

- Sales generally increase toward the **end of the year**, especially in the last quarter.
- Profit follows a similar trend but fluctuates depending on product discounts and cost structure.
- The increase in sales during the final months may indicate **seasonal demand or holiday sales impact**.

---

5. Category Wise Profit Analysis



The dashboard compares profits across three major product categories:

- Furniture
- Office Supplies
- Technology

Key Insights

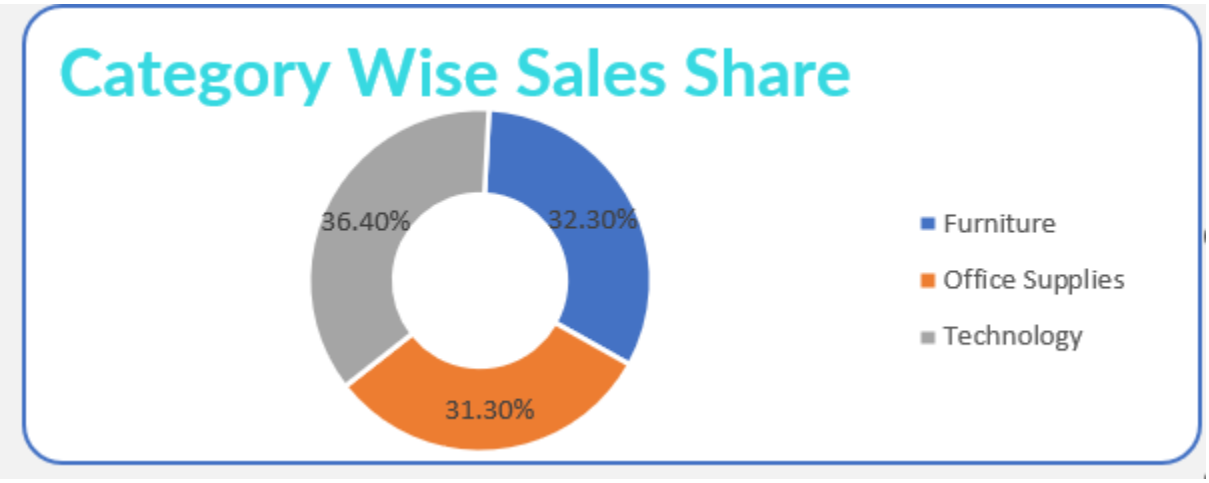
- **Technology category generates the highest profit**.
- **Office Supplies contribute moderate profit levels**.
- **Furniture category produces the lowest profit** compared to its sales volume.

This suggests that some furniture products may have **lower profit margins or higher operational costs**.

---

6. Category Wise Sales Distribution

The **Sales Share Chart** shows how total sales are distributed among different categories.



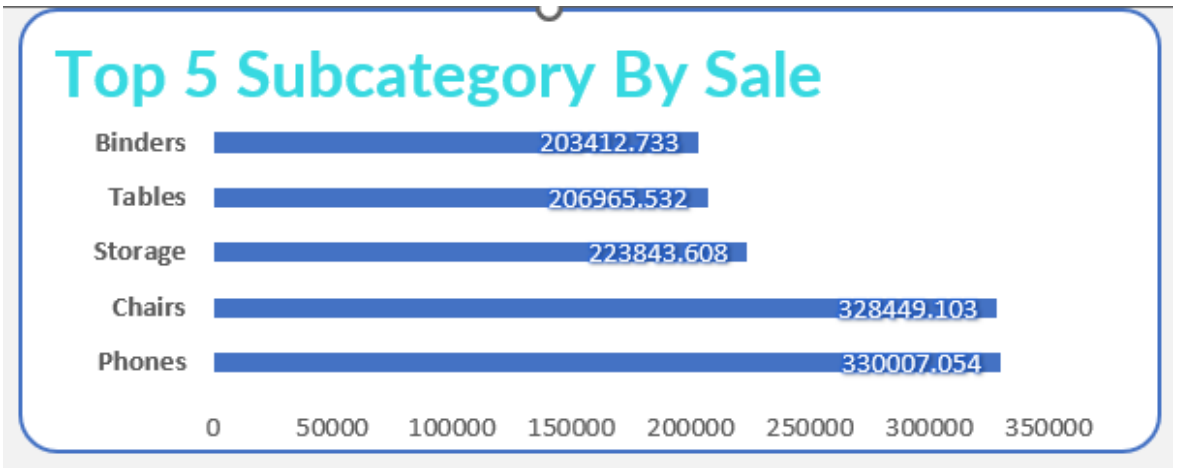
Observations

- Technology contributes approximately **36% of total sales**.
- Furniture contributes about **32% of total sales**.
- Office Supplies account for around **31% of total sales**.

This indicates that sales are **fairly balanced across categories**, though profitability varies.

---

7. Top Performing Subcategories



Insights

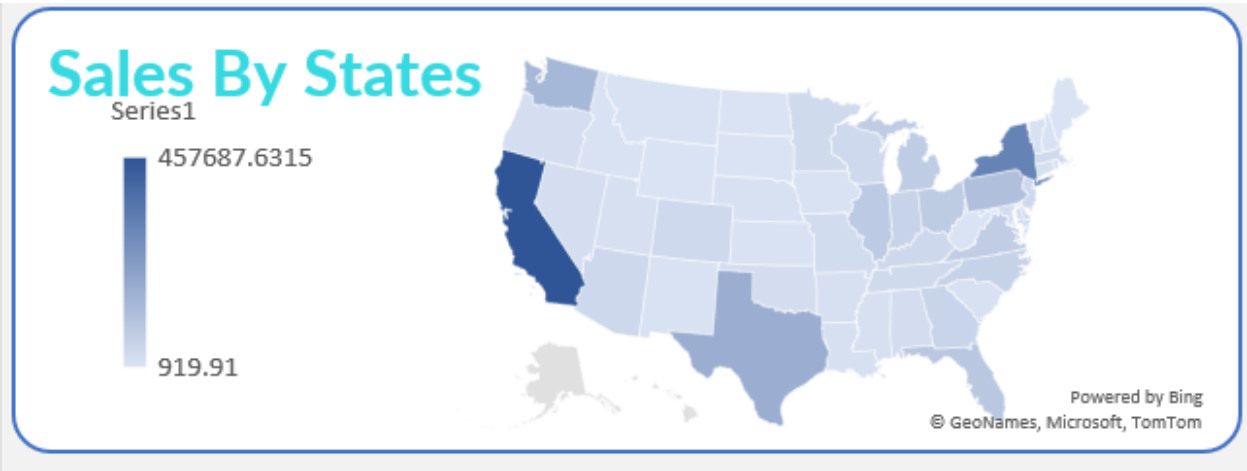
- **Phones generate the highest revenue** among all subcategories.

- **Chairs also contribute significantly to total sales**.
- Some categories with high sales may not necessarily generate the highest profit.

---

8. Geographic Sales Analysis

The **Sales by States map visualization** shows geographic distribution of sales.



Key Observations

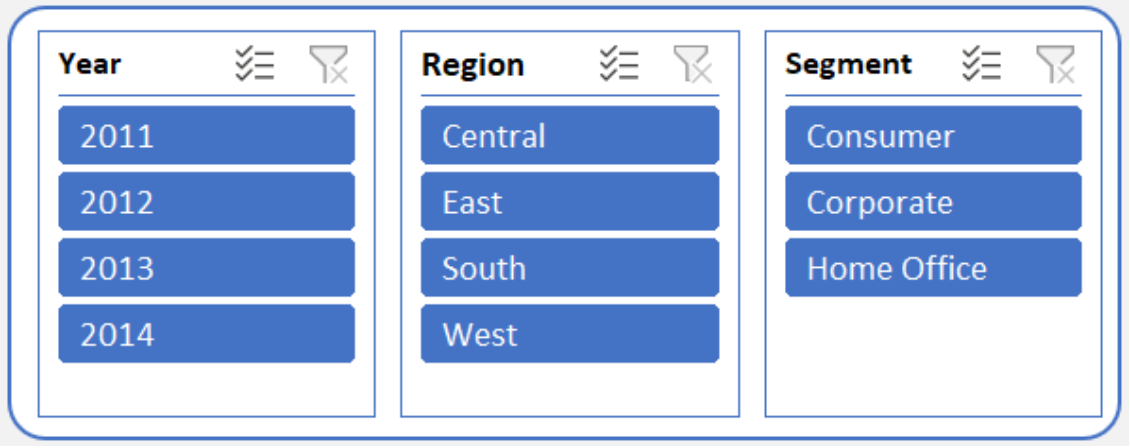
- Western states, especially **California**, generate the highest sales.
- Some central states show lower sales performance.

This indicates strong demand in **western regions of the market**.

---

9. Interactive Filters

The dashboard includes filters that allow users to analyze data by:



These filters help users perform **dynamic analysis and explore trends across different segments**.

---

10. Key Business Insights

From the dashboard analysis, several important insights were identified:

1. The business generated **$2.29M in sales with a profit margin of 12.47%**.
2. **Technology category is the most profitable product category**.
3. **Phones and Chairs are the top-selling subcategories**.
4. **Western states contribute the highest sales revenue**.
5. Sales increase significantly during the **last quarter of the year**.

---

11. Business Recommendations

Based on the analysis, the following recommendations can improve business performance:

1. Focus on High Profit Categories

Increase marketing efforts for **Technology products**, which generate the highest profit.

2. Optimize Discount Strategy

High discounts may reduce profitability. A better **pricing strategy** should be implemented.

3. Expand High Performing Regions

Focus marketing campaigns on **high-demand regions such as the West** to maximize revenue.

4. Improve Low Margin Categories

Analyze **Furniture products** to improve pricing or reduce operational costs.

---

12. Tools Used

The following tools and techniques were used to build this project:

- Microsoft Excel
- Pivot Tables
- Data Visualization
- Dashboard Design
- Data Analysis

Conclusion

The Ecommerce Sales Analysis Dashboard provides a clear overview of business performance through interactive visualizations and key performance indicators. The analysis highlights profitable product categories, top-performing regions, and important sales trends.

These insights can help businesses make **data-driven strategic decisions to improve profitability and sales growth**.
